

PROJECT

X2.0

Scaling up program of EU deeptech startups

The X2.0 promotes the growth and strengthening of relationships between moderately innovative and highly innovative regions by providing needs-based, custom, industry-focused, growth programs to deep-tech startups.

This project has received funding from the European Union's Horizon 2020 Research And Innovation programme under Grant Agreement N° 101073781

01 Challenge

Europe is paving the way for the development of deeptech startups and scaleups, however, we are still experiencing a fragmented continent, with western and innovative regions dominating in delivering market-ready applications and technology solutions over the Widening and Eastern European countries. Europe must cohesively work together to establish synergies between fragmented ecosystems, EU funded initiatives and programmes.

02 Solution

The project will distribute €1.5M in innovation and scaling up services to 50 deep-tech startups and will contribute to the offering of the EIC program. The X2.0 is a sustainable legacy project of X-Europe (ICT-33-2019), and aims to leverage its predecessors' established ecosystem, network, proven innovation action/Startup Europe methodology, and learnings, to generate a next-gen coordination action mechanism.

03 Impacts

Contribute to the competitiveness and strategic autonomy of EU industry in key technology areas (Manufacturing & Circular Economy, AgriTech, HealthTech & BioTech, Smart Cities and Sustainability, and Data & A.I.) Enable growth of promising deeptech startups, connect more and less innovative ecosystems.
